

How to connect an IOS device to the EDUROAM VUT WI-FI network

1. Click Settings->Wi-Fi and on the page you will find the item **Other...** (Jiná..) in the middle part.

2. Enter Eduroam in the name and select the **WPA2 enterprise security type** (WPA2 podnikové) and return with the **Other network** (Jiná síť) button. After returning, additional options will open to fill.

3. Fill in the user (assigned BUT e-mail) according to the picture, and you can find the password in the VUTpin item on the first line of the intraportal.

The screenshot shows a mobile application interface for VUT. At the top, there is a navigation bar with the VUT logo and several menu items: PORTAL, STUDIS, TEACHER, ELEARNING, and APOLLO. Below this, a search bar and a list of menu items are visible. The main content area displays the 'BUT PIN' page, which includes the following information:

- Home > BUT pin
- BUT PIN**
- Your BUT PIN is " [redacted] " and its validity expires **416 days** on Thu 9 Oct 2025 0:00.
- BUT PIN serves as access code to some BUT applications and networks.
- Currently, BUT PIN is used in the following applications:
 - BUT WIFI network
 - EDUROAM WIFI network
 - Wifi network eduroam application
 - VPN network
- To generate a new BUT PIN press the following button
- [Generate new BUT PIN](#)

At the bottom of the page, there is a footer with the CVIS logo, the text "If you have any questions or problems with the intraportal system, please contact us", and the copyright notice "© 2004-2024".

4. If the network untrust window appears, just click **Trust** (Důvěřovat) in the upper right corner.

5. Subsequently, the network is set and the connection is active.
